## SUMMARY

---

Lead Software Engineer with over 10 years of experience specializing in high-scale distributed systems and event-driven architectures. I architect cloud-native solutions that handle billions of records daily and support high-concurrency traffic with sub-second latency. My work integrates Generative AI and autonomous agents into operational workflows to eliminate manual engineering toil and drive developer productivity while ensuring enterprise-scale reliability.

## TECHNICAL SKILLS

---

**Programming Languages:** Python, Java, C/C++

**Artificial Intelligence:** Generative AI (GenAI), Large Language Models (LLMs), Prompt Engineering, MCP (Model Context Protocol)

**Frameworks and Tools:** Spring, Spring Boot, FastAPI, Django, AWS Cloud, Apache Kafka, PostgreSQL, Redis, MongoDB, Kubernetes

**DevOps/Tools:** CI/CD (Jenkins/GitHub Actions), Docker, Git, JIRA

## WORK EXPERIENCE

---

### Lead Software Engineer

New York, NY

*Financial Industry Regulatory Authority*

Jan 2025 - Current

- Pioneered GenAI-driven operational efficiency by developing an autonomous AI Agent that automates Lambda runtime upgrades; reduced engineering manual effort by 80% and ensured enterprise-wide compliance with latest security patches.
- Architected a high-performance serverless REST API designed for high-concurrency data dissemination, maintaining consistent sub-second latency while handling peak traffic of 800+ TPS.
- Architected automated data ingestion process using Apache Kafka and Aurora PostgreSQL, processing over 1.2 billion records daily with high write throughput to support enterprise-scale data requirements.

### Software Engineer

Rockville, MD

*Financial Industry Regulatory Authority*

Feb 2019 - Dec 2024

- Engineered an asynchronous, serverless RESTful API utilizing S3 pre-signed URLs, enabling high-performance bulk data retrieval while minimizing server load and bandwidth costs.
- Developed a standardized Lambda Authorizer for AWS API Gateway, adopted as the enterprise-wide security framework; reduced cross-team development cycles by 15% by providing a plug-and-play authentication solution for all microservices.
- Engineered a strategic migration of internal APIs to AWS Fargate, optimizing container orchestration and reducing infrastructure code by 62%.

### Software Developer Intern

Bowling Green, Ohio

*Senecio Corporation*

Oct 2017 - Dec 2018

- Implemented a high-performance geospatial REST API using Redis Geohashing, enabling real-time location-based data retrieval with sub-500ms latency.

- Engineered an asynchronous backend service for event creation, optimizing multi-part upload logic to support high-volume media ingestion of files.
- Improved system responsiveness by offloading heavy media processing tasks to background workers, ensuring a seamless user experience during large file uploads.

## **Programmer Analyst**

*Cognizant Technology Solutions*

**Pune, India**

*July 2014 - Dec 2016*

- Developed enterprise-grade web applications utilizing Spring Boot, implementing robust architectural patterns to ensure code maintainability and system scalability.
- Collaborated within a globally distributed Agile team to deliver modern web architectures, ensuring seamless integration across cross-functional modules.

## **EDUCATION**

---

### **Bowling Green State University**

*Master of Science in Computer Science*

**Bowling Green, OH, USA**

*Dec 2016 - Dec 2018*

### **Government College of Engineering**

*Bachelor of Science in Computer Science*

**Amravati, Maharashtra, India**

*June 2010 - April 2014*

## **CERTIFICATION**

---

- AWS Certified Developer Associate [Link](#)
